Staff transfer
1 I**nternal transfer (within the same school/tenant)**
2 **External transfer (between different schools/tenants)**

---

1. Types of Staff Transfers

A. Internal Staff Transfer (Most Common)

Example:

- Teacher moved from **Grade 4 → Grade 6**
- Staff moved from **Campus A → Campus B**
- Teacher moved from **Teaching → Academic Coordinator**
- Staff moved from **Finance → Admin Office**

This happens **within the same tenant**.

Handled inside the system without cross-tenant communication.

B. External Staff Transfer (Less Common)

Example:

- Teacher moves from **School A → School B**
- Same school group network
- Teacher relocation

In this case:

```
Tenant A → Tenant B
```

But usually:

Staff **resigns** from School A and **applies** to School B.

Rarely an automatic transfer.

---

2. Which Module Handles Staff Transfers

Staff transfers belong to the **Human Resource (HR) Module**.

Structure:

```
HR Module
   ├ Staff Management
   ├ Recruitment
   ├ Staff Transfers
   ├ Promotions
   ├ Terminations
```

Submodule:

```
HR → Staff Transfers
```

---

3. Who Can Initiate Staff Transfers

Role	Permission
Tenant Admin	Full
HR Manager	Full
Principal / Head Teacher	Approve
Department Head	Request
Staff Member	Request (optional)

---

4. Internal Staff Transfer Workflow

Example: Teacher moved from **Grade 5 → Grade 7**

Step 1

Department Head or HR requests transfer.

Step 2

HR reviews.

Step 3

Principal approves.

Step 4

System updates:

- department
- subjects
- class assignments
- timetable

System Changes

Update:

```
staff.department
staff.role
staff.subjects
staff.timetable
```

---

5. Internal Transfer Data Fields

Transfer record:

```
StaffTransfer
```

Fields:

```
id
staff_id
from_department
to_department
from_role
to_role
effective_date
transfer_reason
requested_by
approved_by
status
```

Status:

```
Pending
Approved
Rejected
Completed
```

---

6. Example Internal Transfer

Teacher Mary:

```
From:
Primary Department
Grade 4 Math Teacher
```

Transfer to:

```
Secondary Department
Grade 7 Math Teacher
```

System updates:

- class assignments
- timetable
- subject allocation

---

7. Staff Self-Transfer Request (Optional Feature)

Staff portal could allow:

```
Staff → Request Transfer
```

Example reasons:

- workload
- relocation
- department preference
- promotion

But must still be **approved by HR**.

---

8. External Staff Transfer (Tenant A → Tenant B)

This is similar to **recruitment**.

Real process:

Step 1

Staff applies to new school.

Step 2

New school requests reference.

Step 3

Old school may share employment confirmation.

Step 4

New school creates a new employee record.

Important:

Staff record **should NOT be automatically transferred between tenants.**

Because of **privacy laws and HR confidentiality**.

---

9. What Information Can Be Shared Between Tenants

If both schools are on your platform, they can optionally send a **staff reference profile**.

Safe information:

Identity

- full name
- date of birth
- gender
- nationality

Professional

- subjects taught
- teaching license
- certifications
- years of experience

Employment

- position
- employment start date
- employment end date

Reference

```
Eligible for rehire: YES / NO
```

---

10. Data That Should NOT Be Shared

Never automatically share:

- salary history
- disciplinary investigations

- HR complaints
- internal reviews
- payroll data
- performance reports

Instead share **summary reference**.

Example:

```
Performance rating:
Excellent / Good / Average
```

---

11. Cross-Tenant Staff Transfer Workflow

If allowed in your SaaS:

```
School B → Request Staff Reference
```

Process:

```
School B HR
    ↓
Request Reference
    ↓
School A HR Approves
    ↓
Staff Profile Shared
```

Not a full transfer.

---

12. Staff Data Management in the New Tenant

School B must create a **new staff record**.

Example:

School A:

```
STAFF-234
```

School B:

```
STAFF-911
```

But store:

```
previous_employer
reference_id
```

---

13. Notifications

Transfer actions trigger notifications.

Internal Transfer

Notify:

- staff member
- department head
- HR
- timetable manager

Channels:

- system notification
- email
- SMS (optional)

---

14. System Changes After Transfer

The system should automatically update:

Classes

```
Teacher removed from old classes
```

```
Teacher assigned to new classes
```

Timetable

```
Regenerate timetable slots
```

Subjects

```
Assign new subjects
```

Permissions

Update roles:

```
Teacher
Department Head
Coordinator
```

---

15. Advanced Feature (For School Networks)

If multiple campuses belong to the **same organization**, staff transfers can be **true transfers**.

Example:

```
Rynaty International Group
   ├ School A
   ├ School B
   ├ School C
```

Then staff can move across tenants.

Data transferred:

- full staff profile
- certifications
- teaching assignments
- HR records

But still **approval workflow required**.

---

16. Staff Transfer Lifecycle

Internal:

```
Department Request
       ↓
HR Review
       ↓
Principal Approval
       ↓
System Updates Role
       ↓
Transfer Completed
```

External:

```
Staff Applies
       ↓
New School Requests Reference
       ↓
Old School Sends Reference
       ↓
New School Hires Staff
```

---

17. Best UX Structure

HR dashboard:

```
HR Module
   ├ Staff
   ├ Recruitment
   ├ Transfers
   ├ Promotions
   ├ Terminations
```

Transfer page:

```
Pending Transfers
Approved Transfers
Completed Transfers
```

---

18. Recommended Database Tables

```
StaffTransfer
StaffTransferRequest
StaffReference
```

---

19. Key Security Rule

Student transfers **can share limited data**.

Staff transfers must be **much stricter** because of **employment privacy laws**.

 Best practice for your SaaS:

Student transfers → supported between tenants
Staff transfers → mostly internal, cross-tenant only via **reference sharing**
